Current Research Interests

- *In silico* approaches and bio-NMR for drug discovery purposes
- Metabolomics profiling (NMR, LC-MS) in biological and natural products extracts matrices

Within the research area of Chemical Biology current activities involve virtual screening, molecular docking, molecular dynamics and bio-NMR as a screening assay i.e. STD-NMR/15N HSQC towards hit identification and optimization. Major topics I have been involved include:

- innovative neuroprotective and neurogenerative synthetic micro-neurotrophins modulators of TrkA and p75^{NTR} activity targeting Alzheimer disease
- novel, selective inhibitors of the mutated BRAF^{V600E} protein implicated in cancer
- novel nonsteroidal selective glucocorticoid receptor agonists as anti-inflammatory agents
- new inhibitors of the aspartic proteases involved in diseases such as hypertension and AIDS
- new eco-friendly repellents from natural sources against *Anopheles gambiae* mosquito odorant binding proteins targeting malaria transmission

Within the research area of omics studies current activities involve untargeted studies in the following topics:

- metabolomics-based gut microbiota profiling to highlight the health impact of β-glucan-rich edible mushrooms

- metabolomics studies applied to intracellular matrices upon treatment with natural or synthetic antioxidants as an assay to monitor cell defense responses.
- authenticity markers of high added value natural products (i.e. grape derived products)
- high throughput fingerprinting of red *Laurencia* algal extracts targeting new natural products or screening for specific bioactive metabolites

Moreover, I have been involved in a number of studies towards structure elucidation of novel bioactive metabolites isolated from terrestrial or marine sources
